

RON SMITH & ASSOCIATES, INC.

Laboratory Photography for the Forensic Professional

Course Description

Taking examination quality photographs of both processed and unprocessed latent print or footwear impressions in the laboratory comes with its own unique set of challenges. Laboratory photographers must have a deep understanding of various types of lenses, filters, light sources and accessories in order to properly compose and illuminate evidence for imaging during the various stages of sequential processing. This class will teach students about camera equipment, camera functions, correct exposure, light balance, forensic light sources, and other important considerations for taking quality comparison photographs. Additionally, students will complete hands-on exercises using a variety of cutting-edge photography equipment.

Target Audience

This 40-hour class is designed for both new and experienced latent print examiners, laboratory technicians, forensic photographers, and other personnel who are responsible for photographing evidence and latent print impressions in a laboratory environment.

Must Bring to Class

Students should bring a notebook or laptop for notetaking. Dress is business casual, as there will be practical exercises. Photography equipment will be provided.

Course Topics Include:

- Introduction to fundamentals of photography
- Digital photography equipment
- Understanding camera controls and photography modes
- Exposure triangle, shutter speed, ISO, and aperture
- Lenses, focus and depth of field
- Image quality, resolution and image types
- Lighting techniques
- Light theory and use of forensic light sources
- Camera filters and full spectrum imaging (ultraviolet and infrared)
- Latent print photography and requirements for comparison quality photographs
- Overview of current forensic photography technology
